

# Star Wars AVG adjustments

Go into self-test and press the Aux coin button to advance up to the crosshatch screen. Adjust the X and Y center pots so it's centered, and the X and Y size so it fills the screen. Then adjust the X and Y linearity (XLIN and YLIN) so the diagonal lines are straight and the diamonds are all similar in size. You may then need to repeat the centering and size adjustments. Finally, go a few more screens to the BIP Test and then adjust the X and Y BIP pots so the rectangles overlap and it looks like a single box.

\*The TL082 with the blue tape does not affect X and Y - it is part of the intensity circuit
